Project Abstract Submission Form

Sec No- 9	Team No- 11	Project Title- Hospital Management & Appointment System
-----------	-------------	---

1. Abstract

The **Hospital Management & Appointment System** is an integrated web-based portal designed to digitize and simplify the management of hospital operations. The system provides a centralized platform for patients, doctors, and administrators to manage healthcare-related activities efficiently. It includes Patient Registration and Electronic Medical Records (EMR), allowing patient details and medical history to be stored and accessed easily.

The Doctor Appointment module enables patients to book appointments with doctors based on their availability. Token and Queue Management helps organize patient flow and reduces waiting time. The system also includes Billing and Insurance Management to maintain payment and insurance-related information. The Pharmacy and Inventory Management module helps track medicines, stock levels, and availability. Laboratory Reports can be managed and accessed through the system for better record maintenance. An Admin Dashboard provides administrators with an overview of hospital activities and helps them manage users, appointments, records, and other services.

The system reduces paperwork, minimizes manual errors, improves data organization, and increases the efficiency of hospital services. It provides a user-friendly and secure environment for managing hospital operations. The proposed system will be developed using React.js for the frontend, Node.js and Express for the backend, MySQL for database management, Sequelize for database interaction, and JWT for authentication and authorization. Overall, the system aims to provide a reliable, efficient, and organized solution for modern hospital management and appointment scheduling.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030101	G. Rishitha	
2520030491	Sree Haasini	
2520030492	A Priya	

3. Frameworks / Platforms / Software Used

- React.js
- MySQL
- Node.js
- Express
- Sequelize
- JWT.
